, v. L	J 00101							

/Thomas R. Hannon/ Primary Examiner, Art Unit 3682 Continuation of 11. does NOT place the application in condition for allowance because: The Declaration, and Applicant's arguments are unconvincing with respect to the Sattamakik reference having zero torque. It is noted that Paragraph 9 of the Caleration "liquid lubricant cannot be used ina bearing when a high forque is also required - they are incompatible features". However, it is not stated that Sattamakik possesses "high forque", only non-zero torque. The lubricant is necessary in Sattamakik to reduce friction produces the non-zero torque. Additionally, it can be argued that the viscosity of the lubricant between the surfaces (gap or not) imposes a non-zero torque between the ball and the inner race.
